

Dear Hiring Team,

I'm an engineering manager with strong hands-on software engineering experience, seeking a role where I can combine technical leadership with people management, coaching, and predictable delivery. I bring 8+ years in software development and 4+ years in engineering management, alongside long-running leadership experience from structured nonprofit and governance roles since my teens. I'm comfortable aligning product, engineering, and stakeholders around clear outcomes.

At Fujitsu, I serve as Senior Engineering Manager & Principal Full-Stack Developer, currently leading a team of 10 engineers and previously scaling teams up to 25+ at peak. I'm accountable for technical direction and architectural alignment, hiring and onboarding, coaching and performance/salary reviews, and ensuring the engineering roadmap supports business priorities. I also launched an internship program that became a reliable talent pipeline for my department and delivered guest lectures at Campus Mölndal. Previously at Volvo Group, I supported two business-critical systems end-to-end, building solid experience across development and operational responsibility.

Outside of work, I've held leadership roles in nonprofits, including chairman of a 90-unit housing cooperative and board member/instructor for Aktiv Ungdom. In the cooperative, I anticipated rising rates and secured a five-year fixed rate a year in advance, reducing interest costs, shielding residents from fee increases, and delivering substantial savings.

I'd appreciate the opportunity to discuss how I can help your teams deliver high-quality software, grow engineers, and scale healthy practices. I'm seeking a permanent role; however, if required for cross-border hiring, I can also accommodate an employer-of-record (EOR) or other compliant engagement model. Compensation is flexible depending on scope and the overall package.

Thank you for your time and consideration.

Best regards,
Anton Berg
