

Anton Berg

Improving software and communicating how and why we do that

SUMMARY

I am an engineering manager with strong developer experience. I have a great interest and enjoyment of software development and leadership. These are the two main interests of my life, I take them seriously, and I feel that I excel within both of them. The best parts of myself I feel comes forth in leading, coaching, teaching, and collaborating with colleagues. When we work together to solve current and future challenges through software development.

I have a genuine understanding of all aspects of software development as I am skilled in Full-Stack Development using mainly C#, ReactJS, Typescript, Entity Framework, CI/CD pipelines and IaC using bicep, DevOps, Azure cloud, Linux, and SQL. This together with my life long experience of leadership and governance puts me in a good position to perform an engineering manager role.

EXPERIENCE

Fujitsu – Value Stream Lead & Engineering Manager

September 2021 – Present (4 years 1 month)

Senior Engineering Manager & Principal Full-Stack Developer leading a team of up to 25+ engineers. Accountable for technical direction, architecture, hiring, coaching, performance and salary reviews, and aligning engineering roadmaps with business strategy. Hands-on in .NET, Azure, and modern JavaScript (React, TypeScript, Node.js), with a strong focus on knowledge sharing and an inclusive engineering culture.

Selected achievements:

- Built and mentored a full-stack team of up to 25+ developers.
- Led the development and launch of 6 SaaS products.
- Acted as lead technical authority in multiple critical business deals.
- Owned the technical roadmap for a B2B product serving 300+ customers.
- Defined and implemented the ITIL-based ALM solution used by 16 customers.
- Delivered lectures at Campus Mölndal and contributed to shaping their developer curriculum.
- Drove recruitment, conducting 60+ interviews and successfully hiring 8 high-performing developers.
- Formed and led a fully remote DevOps team spread globally.

Forming Way of Working

Volvo Group – Software Developer

January 2018 – September 2021 (3 years)

I was part of the team responsible for two business critical systems, carrying a shared responsibility for all aspects of their development and support. My first professional experience in software development came after being scouted for a talent initiative late 2017. I worked with the Volvo group on a trial period which developed into a full time position.

VOLUNTEER WORK

BRF Svenska Folkbyggen Nr 8 – Chairman

January 2020 – March 2022 (2 years 3 months)

I was the Chairman of my Housing Cooperative Board, responsible for the administration of more than 90 apartments and one restaurant.

Aktiv Ungdom – Board Member

2014 – August 2021 (7 years)

I held a board position at Aktiv Ungdom at both state and district level. This board position created my interest in non-profit organisations. Here I am responsible for the organisation as a whole which includes By-law revision, district grant distribution strategies, conflict resolution, inter-group communication, initiative startups, allocation and investment of funds into projects and sub-organizations. I am particularly proud that I established and executed a policy of monthly touchpoints with our employees in order to increase the board's insight into their disposition towards their roles, needs, and future goals.

Aktiv Ungdom – Instructor and Youth Leader

2008 – 2012 (4 years)

As a youth leader and parkour instructor for Expedition X, I was responsible for planning and executing weekly training, supporting the education of new leaders, and hosting training camps.

EDUCATION

University of Borås – Bachelor's degree, Computer Science

(2012 – 2015)

I completed the Systems Architecture program with a main focus on practical programming knowledge. My finished thesis used Deep Reinforcement Learning within Unreal Tournament to better determine if playing versus the AI was more fun to compete against than the preprogrammed AI opponent.

University of Gothenburg – *International Relations and Affairs*

(2016 – 2017)

During my gap year I studied governance with focus on political history and global political socionomics. This education helped me to better understand governance and leadership.
